INDEX TO AUTHORS

A

Abell, Liese L., Mosbach, E. H., and **Kendall, Forrest E.** Cholesterol metabolism in the dog, 527

Aisenberg, A. C., and **Potter, Van R.** Effect of coenzyme A on acetate activation, 831

Alessandrini, Alessandro, Schmidt, Eberhard, Zilliken, Friedrich, and **György, Paul.** Enzymatic synthesis of β-D-galactosides of *N*-acetyl-D-glucosamine by various mammalian tissues, 71

Alex, Theodore. See *Saltman, Fiskin, Bellinger, and Alex,* 751

Alexander, Nicholas, and **Greenberg, David M.** Studies on the purification and properties of the serine-forming enzyme system, 775

Allen, C. Freeman, and **Cason, James.** Persistent characteristics of the higher fatty acids from the lipides of the tubercle bacillus, 407

—. See *Cason, Allen, DeAcetis, and Fonken,* 893

Alling, Eric. See *Monty, Morrison, Alling, and Stotz,* 295

Ames, Bruce N., and **Horecker, B. L.** The biosynthesis of histidine: imidazoleacetol phosphate transaminase, 113

Ashmore, James, Kinoshita, J. H., Nesbett, Frances B., and **Hastings, A. Baird.** Studies on carbohydrate metabolism in rat liver slices. VII. Evaluation of the Embden-Meyerhof and phosphogluconate oxidation pathways, 619

Asnis, Robert E., and **Glick, Mary Catherine.** The microdetermination of formate produced from pyruvate by cell-free extracts of *Escherichia coli,* 691

Aspen, Anita J. See *Christensen, Aspen, and Rice,* 287

Awapara, Jorge. See *Doctor and Awapara,* 161

B

Balls, A. K. See *Tookey and Balls,* 15

Bellinger, Sydney B. See *Saltman, Fiskin, and Bellinger,* 741

—. See *Saltman, Fiskin, Bellinger, and Alex,* 751

Bernfeld, Peter, and **Nisselbaum, J. S.** A modified method for protein separation by zone electrophoresis on a starch gel, 851

Bloom, Ben. See *Stetten and Bloom,* 723

Borsook, Henry. See *Kruh and Borsook,* 905

Bovarnick, Marianna R. Phosphorylation accompanying the oxidation of glutamate by the Madrid E strain of typhus rickettsiae, 353

Bowen, William J., and **Kerwin, Timothy D.** A simple method for assaying adenosine triphosphate and adenosine diphosphate in mixtures, 9

Brown, B. T., and **Wright, S. E.** The cardioactive metabolites of digitalis glycosides, 431

Brown, George Bosworth. See *Gordon and Brown,* 927

—. See *Lowy, Brown, and Rachele,* 325

—. See *Roll, Weinfeld, Carroll, and Brown,* 439

Brown, G. W., Jr. See *Lossow, Brown, and Chaikoff,* 839

Brumm, Anne F., Potter, Van R., and **Siekevitz, Philip.** Nucleotide metabolism. V. Incorporation of P^{32} into acid-soluble nucleotides of rat liver *in vivo,* 713

Bruton, Joseph. See *Horner, Siegel, and Bruton,* 861

Buchanan, John M. See *Levenberg, Hartman, and Buchanan,* 379

—. See *Sonne, Lin, and Buchanan,* 369

Budovich, Tania. See *Pazur and Budovich,* 25

Burr, William W., Jr. See *Tidwell, Dunkelberg, Wood, and Burr,* 733

C

Camien, Merrill N., Dunn, Max S., and **Geller, Edward.** Influence of 1,2-alkanediols on growth of *Lactobacillus casei* 280-16, 169

Canady, William J., and **Roe, Joseph H.** The determination of menadione and methods for the identification of quinones, 563

— and —. Studies on the reaction of menadione with blood and denatured proteins, 571

Carroll, Elizabeth. See *Roll, Weinfeld, and Carroll,* 455

—. See *Roll, Weinfeld, Carroll, and Brown,* 439

Carroll, Nicholas V., Longley, Robert W., and **Roe, Joseph H.** The determination of glycogen in liver and muscle by use of anthrone reagent, 583

Cason, James, Allen, C. Freeman, DeAcetis, William, and **Fonken, Gerhard J.** Fatty acids from the lipides of non-virulent strains of the tubercle bacillus, 893

— and **Fonken, Gerhard J.** Complexity of the mixture of the higher fatty acids from the lipides of the tubercle bacillus, 391

—. See *Allen and Cason,* 407

Chaikoff, I. L. See *Lossow, Brown, and Chaikoff,* 839

Chaykin, Sterling, Meinhart, Josephine O., and **Krebs, Edwin G.** Isolation and properties of a reduced diphosphopyridine nucleotide derivative, 811

—. See *Meinhart, Chaykin, and Krebs,* 821

Cheldelin, Vernon H. See *King and Cheldelin,* 177

Chichester, C. O. See *Mackinney, Nakayama, and Chichester,* 759

Christensen, Halvor N., Aspen, Anita J., and **Rice, Edward G.** Metabolism in the rat of three amino acids lacking α-hydrogen, 287

— and **Collins, Sonia.** Metal-chelated pyridoxylidene derivatives of glycine and α,γ-diaminobutyric acid, 279

— and **Riggs, Thomas R.** Structural evidences for chelation and Schiff's base formation in amino acid transfer into cells, 265

Christensen, Halvor N. See *Gregerman and Christensen,* 765

Cleland, W. W., and **Johnson, Marvin J.** Studies on the formation of oxalic acid by *Aspergillus niger,* 595

Cohen, Philip P. See *Lowenstein and Cohen,* 57

Collins, Sonia. See *Christensen and Collins,* 279

Crockett, Alan L. See *Dickman and Crockett,* 957

D

Davis, Bernard D. See *Srinivasan, Shigeura, Sprecher, Sprinson, and Davis,* 477

DeAcetis, William. See *Cason, Allen, DeAcetis, and Fonken,* 893

Dickman, Sherman R., and **Crockett, Alan L.** Reactions of xanthydrol. IV. Determination of tryptophan in blood plasma and in proteins, 957

—. See *Speyer and Dickman,* 193

Di Ferrante, Nicola. Turbidimetric measurement of acid mucopolysaccharides and hyaluronidase activity, 303

Doctor, V. M., and **Awapara, Jorge.** The incorporation of serine-3-C^{14} into citrovorum factor, 161

Downing, Mancourt, and **Schweigert, B. S.** Rôle of vitamin B_{12} in nucleic acid metabolism. III. Preparation of C^{14} uniformly labeled pyrimidine deoxynucleosides, 513

— and —. IV. Metabolism of C^{14}-labeled thymidine by *Lactobacillus leichmannii,* 521

Dunkelberg, Carolyn. See *Tidwell, Dunkelberg, Wood, and Burr,* 733

Dunn, Max S. See *Camien, Dunn, and Geller,* 169

E

Edwards, Sally W., and **Knox, W. Eugene.** Homogentisate metabolism: the isomerization of maleylacetoacetate by an enzyme which requires glutathione,

Eichel, Herbert J. Purine-metabolizing enzymes of *Tetrahymena pyriformis*, 209
Ellis, Stanley, and **Simpson, Miriam E.** The chromatography of growth hormone on cellulose derivatives, 939
Eydt, Kathryn M. See *Robins, Eydt, and Smith*, 677
—. See *Robins, Lowry, Eydt, and McCaman*, 661

F

Fish, William A. See *Stokes, Fish, and Hickey*, 415
Fiskin, Robert D. See *Saltman, Fiskin, and Bellinger*, 741
—. See *Saltman, Fiskin, Bellinger, and Alex*, 751
Fonken, Gerhard J. See *Cason, Allen, DeAcetis, and Fonken*, 893
—. See *Cason and Fonken*, 391
Frieden, Earl. See *Younathan and Frieden*, 801
Friedkin, Morris, and **Roberts, DeWayne.** Conversion of uracil deoxyriboside to thymidine of deoxyribonucleic acid, 653
—, **Tilson, Donald,** and **Roberts DeWayne.** Studies of deoxyribonucleic acid biosynthesis in embryonic tissues with thymidine-C^{14}, 627
— and **Wood, Horatio, IV.** Utilization of thymidine-C^{14} by bone marrow cells and isolated thymus nuclei, 639
Frohman, Charles E., and **Orten, James M.** Tracer studies of acids of the tricarboxylic acid cycle. II. Effect of fructose and bicarbonate on acetate metabolism in livers of diabetic rats, 315
Fukushima, David K., and **Gallagher, T. F.** Identification of D-homosteroids in extracts of human urine, 951
—. See *Hubener, Fukushima, and Gallagher*, 499
—. See *Miller, Turner, Fukushima, and Salamon*, 221

G

Gallagher, T. F. See *Fukushima and Gallagher*, 951
Gallagher, T. F. See *Hubener, Fukushima, and Gallagher*, 499
Geiger, Walton B. The creatine phosphoferase of a visceral muscle, 871
Geller, Edward. See *Camien, Dunn, and Geller*, 169
Gergely, J. The interaction between actomyosin and adenosine triphosphate. Light scattering studies, 917
Gershoff, S. N. See *Vitale, Gershoff, Sinisterra, Hegsted, and Zamcheck*, 363
Gibson, John G., 2nd. See *Lionetti, Rees, Healey, Walker, and Gibson*, 467
Glick, Mary Catherine. See *Asnis and Glick*, 691
Gordon, Milton P., and **Brown, George Bosworth.** A study of the metabolism of purine riboside, 927
Green, Saul, Mazur, Abraham, and **Shorr, Ephraim.** Mechanism of the catalytic oxidation of adrenaline by ferritin, 237
—. See *Mazur, Green, and Shorr*, 227
Greenberg, David M. See *Alexander and Greenberg*, 775
—. See *Sayre and Greenberg*, 787
Greenfield, Robert E., and **Price, Vincent E.** Liver catalase. III. Isolation of catalase from mitochondrial fractions of polyvinylpyrrolidone-sucrose homogenates, 607
Gregerman, Robert I., and **Christensen, Halvor N.** Enzymatic and non-enzymatic dehydrochlorination of β-chloro-L-alanine, 765
György, Paul. See *Alessandrini, Schmidt, Zilliken, and György*, 71

H

Hanahan, Donald J. See *Uziel and Hanahan*, 1
Hartman, Standish C. See *Levenberg, Hartman, and Buchanan*, 379
Hastings, A. Baird. See *Ashmore, Kinoshita, Nesbett, and Hastings*, 619
Healey, William A. See *Lionetti, Rees, Healey, Walker, and Gibson*, 467
Hegsted, D. Mark. See *Vitale, Gershoff, Sinisterra, Hegsted, and Zamcheck*, 363

Hickey, Frederick C. See *Stokes, Fish, and Hickey*, 415
Horecker, B. L. See *Ames and Horecker*, 113
Horner, William H., Siegel, Irwin, and **Bruton, Joseph.** The synthesis of arginine from guanidoacetic acid, 861
Howton, David R. See *Steinberg, Slaton, Howton, and Mead*, 257
Hubener, H. J., Fukushima, David K., and **Gallagher, T. F.** Substrate specificity of enzymes reducing the 11- and 20-keto groups of steroids, 499
Hudson, Perry B. See *Lombardo, Hudson, and Yandel*, 699

J

Johnson, Marvin J. See *Cleland and Johnson*, 595
—. See *Vavra and Johnson*, 33
Jones, Howard W., Jr. See *Wade and Jones*, 547, 553

K

Kaplan, Nathan O. See *Lenhoff and Kaplan*, 967
—. See *Lenhoff, Nicholas, and Kaplan*, 983
—. See *Weber, Lenhoff, and Kaplan*, 93
Kendall, Forrest E. See *Abell, Mosbach, and Kendall*, 527
Kerwin, Timothy D. See *Bowen and Kerwin*, 9
King, Tsoo E., and **Cheldelin, Vernon H.** Oxidation of acetaldehyde by *Acetobacter suboxydans*, 177
Kinoshita, J. H. See *Ashmore, Kinoshita, Nesbett, and Hastings*, 619
Knox, W. Eugene. See *Edwards and Knox*, 79
Krebs, Edwin G. See *Chaykin, Meinhart, and Krebs*, 811
—. See *Meinhart, Chaykin, and Krebs*, 821
Kruh, Jacques, and **Borsook, Henry.** Hemoglobin synthesis in rabbit reticulocytes *in vitro*, 905

L

Lenhoff, Howard M., and **Kaplan, Nathan O.** A cytochrome peroxidase from *Pseudomonas fluorescens*, 967
—, **Nicholas, D. J. D.,** and **Kaplan, Nathan O.** Effects of oxygen, iron, and molybdenum on routes of electron transfer in *Pseudomonas fluorescens*, 983
—. See *Weber, Lenhoff, and Kaplan*, 93
Levenberg, Bruce, Hartman, Standish C., and **Buchanan, John M.** Biosynthesis of the purines. X. Further studies *in vitro* on the metabolic origin of nitrogen atoms 1 and 3 of the purine ring, 379
Lewis, Charles. See *Lowry, Roberts, and Lewis*, 879
Lin, I. See *Sonne, Lin, and Buchanan*, 369
Lionetti, Fabian, Rees, Searle B., Healey, William A., Walker, Burnham S., and **Gibson, John G., 2nd.** The effect of adenosine upon esterification of phosphate by erythrocyte ghosts, 467
Lombardo, Michael E., Hudson, Perry B., and **Yandel, Florian, Jr.** Studies on the *in vitro* perfusion of steroids through the dog kidney, 699
Longley, Robert W. See *Carroll, Longley, and Roe*, 583
Loring, Hubert S. See *Schneider and Loring*, 129
Lossow, W. J., Brown, G. W., Jr., and **Chaikoff, I. L.** The action of insulin in sparing fatty acid oxidation: a study with palmitic acid-1-C^{14} and octanoate-1-C^{14}, 839
Lowenstein, John M., and **Cohen, Philip P.** Studies on the biosynthesis of carbamylaspartic acid, 57
Lowry, Oliver H., Roberts, Nira R., and **Lewis, Charles.** The quantitative histochemistry of the retina, 879
—. See *Robins, Lowry, Eydt, and McCaman*, 661
Lowy, Bertram A., Brown, George Bosworth, and **Rachele, Julian R.** A

study of formaldehyde-C^{14},D_2 as a one-carbon metabolite in the rat, 325

M

Mackinney, G., Nakayama, T., and **Chichester, C. O.** On the biosynthesis of carotenoids, 759
Magar, N. G. See *Nair and Magar*, 157
Mann, George V. See *Portman and Mann*, 105
Mazur, Abraham, Green, Saul, and **Shorr, Ephraim.** The oxidation of adrenaline by ferritin iron and hydrogen peroxide, 227
—. See *Green, Mazur, and Shorr*, 237
McCaman, Richard E. See *Robins, Lowry, Eydt, and McCaman*, 661
McKibbin, J. M. A monophosphoinositide of liver, 537
Mead, James F. See *Steinberg, Slaton, Howton, and Mead*, 257
Meinhart, Josephine O., Chaykin, Sterling, and **Krebs, Edwin G.** Enzymatic conversion of a reduced diphosphopyridine nucleotide derivative to reduced diphosphopyridine nucleotide, 821
—. See *Chaykin, Meinhart, and Krebs*, 811
Miller, W. R., Turner, C. W., Fukushima, David K., and **Salamon, Ivan I.** The identification of C_{19} steroids in bovine feces, 221
Monty, Kenneth J., Morrison, Martin, Alling, Eric, and **Stotz, Elmer.** Electrophoresis of cationic proteins on filter paper, 295
Morrison, Martin. See *Monty, Morrison, Alling, and Stotz*, 295
Mosbach, E. H. See *Abell, Mosbach, and Kendall*, 527

N

Nair, P. P., and **Magar, N. G.** Determination of vitamin E in blood, 157
Nakayama, T. See *Mackinney, Nakayama, and Chichester*, 759
Narrod, S. A., and **Wood, W. A.** Carbohydrate oxidation by *Pseudomonas fluorescens*. V. Evidence for gluconokinase and 2-ketogluconokinase, 45
Nesbett, Frances B. See *Ashmore, Kinoshita, Nesbett, and Hastings*, 619
Nicholas, D. J. D. See *Lenhoff, Nicholas, and Kaplan*, 983
Nisselbaum, J. S. See *Bernfeld and Nisselbaum*, 851

O

Ochoa, Severo. See *Rose and Ochoa*, 307
Orten, James M. See *Frohman and Orten*, 315

P

Pazur, John H., and **Budovich, Tania.** Preferential hydrolysis of glucosidic bonds of malto-oligosaccharides by salivary amylase, 25
Pelton, Richard B. See *Rogers, Pelton, and Williams*, 321
Portman, Oscar W., and **Mann, George V.** Further studies of the metabolism of taurine-S^{35} by the rat, 105
Potter, Van R. See *Aisenberg and Potter*, 831
—. See *Brumm, Potter, and Siekevitz*, 713
Price, Vincent E. See *Greenfield and Price*, 607

R

Rachele, Julian R. See *Lowy, Brown, and Rachele*, 325
Rees, Searle B. See *Lionetti, Rees, Healey, Walker, and Gibson*, 467
Rice, Edward G. See *Christensen, Aspen, and Rice*, 287
Riggs, Thomas R. See *Christensen and Riggs*, 265
Roberts, DeWayne. See *Friedkin and Roberts*, 653
—. See *Friedkin, Tilson, and Roberts*, 627
Roberts, Nira R. See *Lowry, Roberts, and Lewis*, 879

Robins, Eli, Eydt, Kathryn M., and **Smith, David E.** Distribution of lipides in the cerebellar cortex and its subjacent white matter, 677

—, **Lowry, Oliver H., Eydt, Kathryn M.,** and **McCaman, Richard E.** Microdetermination of phospholipides and sphingolipides in brain, 661

Roe, Joseph H. See *Canady and Roe*, 563, 571

—. See *Carroll, Longley, and Roe*, 583

Rogers, Lorene L., Pelton, Richard B., and **Williams, Roger J.** Amino acid supplementation and voluntary alcohol consumption by rats, 321

Roll, Paul M., Weinfeld, Herbert, and **Carroll, Elizabeth.** The utilization of nucleotides by the mammal. V. Metabolism of pyrimidine nucleotides, 455

—, —, —, and **Brown, George Bosworth.** The utilization of nucleotides by the mammal. IV. Triply labeled purine nucleotides, 439

Rose, Irwin A., and **Ochoa, Severo.** Phosphorylation by particulate preparations of *Azotobacter vinelandii*, 307

S

Salamon, Ivan I. See *Miller, Turner, Fukushima, and Salamon*, 221

Saltman, Paul, Fiskin, Robert D., and **Bellinger, Sydney B.** The metabolism of iron by rat liver slices. The effect of physical environment and iron concentration, 741

—, —, —, and **Alex, Theodore.** The metabolism of iron by rat liver slices. The effect of chemical agents, 751

Samuels, Leo T. See *Slaunwhite and Samuels*, 341

Sayre, Francis W., and **Greenberg, David M.** Purification and properties of serine and threonine dehydrases, 787

Schmidt, Eberhard. See *Alessandrini, Schmidt, Zilliken, and György*, 71

Schneider, A. J., and **Loring, Hubert S.** The synthetic activity of prostatic phosphatase in the presence of cytidine and inorganic phosphate, 129

Schweigert, B. S. See *Downing and Schweigert*, 513, 521

Schwimmer, Sigmund, and **Weston, William J.** Effect of phosphate and other factors in potato extracts on amylose formation by phosphorylase, 143

Shigeura, Harold T. See *Srinivasan, Shigeura, Sprecher, Sprinson, and Davis*, 477

Shorr, Ephraim. See *Green, Mazur, and Shorr*, 237

—. See *Mazur, Green, and Shorr*, 227

Siegel, Irwin. See *Horner, Siegel, and Bruton*, 861

Siekevitz, Philip. See *Brumm, Potter, and Siekevitz*, 713

Simpson, Miriam E. See *Ellis and Simpson*, 939

Sinisterra, L. See *Vitale, Gershoff, Sinisterra, Hegsted, and Zamcheck*, 363

Slaton, William H., Jr. See *Steinberg, Slaton, Howton, and Mead*, 257

Slaunwhite, W. Roy, Jr., and **Samuels, Leo T.** Progesterone as a precursor of testicular androgens, 341

Smith, David E. See *Robins, Eydt, and Smith*, 677

Sonne, John C., Lin, I., and **Buchanan, John M.** Biosynthesis of the purines. IX. Precursors of the nitrogen atoms of the purine ring, 369

Speyer, Joseph F., and **Dickman, Sherman R.** On the mechanism of action of aconitase, 193

Sprecher, Milon. See *Srinivasan, Shigeura, Sprecher, Sprinson, and Davis*, 477

Sprinson, David B. See *Srinivasan, Shigeura, Sprecher, Sprinson, and Davis*, 477

Srinivasan, P. R., Shigeura, Harold T., Sprecher, Milon, Sprinson, David B., and **Davis, Bernard D.** The biosynthesis of shikimic acid from D-glucose, 477

Steinberg, Gunther, Slaton, William H., Jr., Howton, David R., and **Mead, James F.** Metabolism of essential fatty acids. IV. Incorporation of linoleate into arachidonic acid, 257
Stetten, DeWitt, Jr., and **Bloom, Ben.** The metabolism of the amidine group of arginine in the intact rat, 723
Stokes, William M., Fish, William A., and **Hickey, Frederick C.** Metabolism of cholesterol in the chick embryo. II. Isolation and chemical nature of two companion sterols, 415
Stotz, Elmer. See *Monty, Morrison, Alling, and Stotz,* 295

T

Tidwell, Herbert C., Dunkelberg, Carolyn, Wood, William A., and **Burr, William W., Jr.** Measurement of the rate of fat absorption, 733
Tilson, Donald. See *Friedkin, Tilson, and Roberts,* 627
Tookey, Harvey L., and **Balls, A. K.** Plant phospholipase D. II. Inhibition of succinic oxidase by cottonseed phospholipase D, 15
Turner, C. W. See *Miller, Turner, Fukushima, and Salamon,* 221

U

Uziel, Mayo, and **Hanahan, Donald J.** An enzymatic route to L-α-glyceryl-phosphorylcholine, 1

V

Vavra, James J., and **Johnson, Marvin J.** Aerobic and anaerobic biosynthesis of amino acids by bakers' yeast, 33
Vitale, J. J., Gershoff, S. N., Sinisterra, L., Hegsted, D. Mark, and **Zamcheck, N.** Effect of Aminopterin administration on the metabolism of liver and small intestine of guinea pigs and rats, 363

W

Wade, Ruth, and **Jones, Howard W., Jr.** Effect of progesterone on mitochondrial adenosinetriphosphatase, 547
— and —. Effect of progesterone on oxidative phosphorylation, 553
Walker, Burnham S. See *Lionetti, Rees, Healey, Walker, and Gibson,* 467
Weber, Morton M., Lenhoff, Howard M., and **Kaplan, Nathan O.** The reduction of inorganic iron and cytochrome *c* by flavin enzymes, 93
Weinfeld, Herbert. See *Roll, Weinfeld, and Carroll,* 455
—. See *Roll, Weinfeld, Carroll, and Brown,* 439
Weston, William J. See *Schwimmer and Weston,* 143
Williams, Roger J. See *Rogers, Pelton, and Williams,* 321
Wood, Horatio, IV. See *Friedkin and Wood,* 639
Wood, W. A. See *Narrod and Wood,* 45
Wood, William A. See *Tidwell, Dunkelberg, Wood, and Burr,* 733
Wright, S. E. See *Brown and Wright,* 431

Y

Yanari, Sam. The reaction of ninhydrin with dipeptides: differences in reaction rates and theoretical yields, 683
Yandel, Florian, Jr. See *Lombardo, Hudson, and Yandel,* 699
Younathan, Ezzat S., and **Frieden, Earl.** Studies on amylase synthesis by pigeon pancreas slices, 801

Z

Zamcheck, N. See *Vitale, Gershoff, Sinisterra, Hegsted, and Zamcheck,* 363
Zilliken, Friedrich. See *Alessandrini, Schmidt, Zilliken, and György,* 71

INDEX TO SUBJECTS

A

Acetaldehyde: Oxidation, *Acetobacter suboxydans*, effect, *King and Chelde-lin*, 177

Acetate: Activation, coenzyme A effect, *Aisenberg and Potter*, 831
Metabolism, liver, diabetes, fructose and bicarbonate effects, *Frohman and Orten*, 315

Acetic acid: Guanido-. *See* Guanido-acetic acid

Acetoacetate: Maleyl-. *See* Maleylace-toacetate

Acetobacter suboxydans: Acetaldehyde oxidation, effect, *King and Cheldelin*, 177

Acetyl-D-glucosamine: *N*-, β-D-galacto-sides, synthesis, enzymatic, *Ales-sandrini, Schmidt, Zilliken, and György*, 71

Aconitase: Action mechanism, *Speyer and Dickman*, 193

Actomyosin: Adenosine triphosphate and, interaction, *Gergely*, 917

Adenosine: Esterification, erythrocyte ghosts and, effect, *Lionetti, Rees, Healey, Walker, and Gibson*, 467

Adenosine diphosphate: Determination, *Bowen and Kerwin*, 9

Adenosinetriphosphatase: Mitochon-drial, progesterone effect, *Wade and Jones*, 547

Adenosine triphosphate: Actomyosin and, interaction, *Gergely*, 917
Determination, *Bowen and Kerwin*, 9

Adrenaline: Oxidation, catalytic, ferri-tin, mechanism, *Green, Mazur, and Shorr*, 237
—, ferritin iron effect, *Mazur, Green, and Shorr*, 227
—, hydrogen peroxide effect, *Mazur, Green, and Shorr*, 227
See also Epinephrine

Alanine: β-Chloro-L-. *See* Chloro-L-alanine

Alcohol: Consumption, amino acid ef-fect, *Rogers, Pelton, and Williams*, 321

Alkanediol(s): 1,2-, *Lactobacillus casei* growth, effect, *Camien, Dunn, and Geller*, 169

Amino acid(s): Alcohol consumption, ef-fect, *Rogers, Pelton, and Williams*, 321
Biosynthesis, yeast effect, *Vavra and Johnson*, 33
α-Hydrogen lacking, metabolism, *Christensen, Aspen, and Rice*, 287
Transfer, chelation and Schiff's base formation, relation, *Christensen and Riggs*, 265

Aminopterin: Intestine, small, metabo-lism, effect, *Vitale, Gershoff, Sinis-terra, Hegsted, and Zamcheck*, 363
Liver metabolism, effect, *Vitale, Gersh-off, Sinisterra, Hegsted, and Zam-check*, 363

Amylase: Saliva, malto-oligosaccharide glucosidic bonds, hydrolysis, effect, *Pazur and Budovich*, 25
Synthesis, pancreas relation, *Youna-than and Frieden*, 801

Amylose: Formation, phosphorylase and potato extracts, relation, *Schwimmer and Weston*, 143

Arachidonic acid: Linoleate from, *Stein-berg, Slaton, Howton, and Mead*, 257

Arginine: Amidine group metabolism, *Stetten and Bloom*, 723
Synthesis, guanidoacetic acid relation, *Horner, Siegel, and Bruton*, 861

Aspartic acid: Carbamyl-. *See* Car-bamylaspartic acid

Aspergillus niger: Oxalic acid formation, effect, *Cleland and Johnson*, 595

Azotobacter vinelandii: Phosphoryla-tion, *Rose and Ochoa*, 307

B

Bacillus: Tubercle. *See* Tubercle ba-cillus
See also Lactobacillus

XUM

Bacteria: *See also Acetobacter, Escherichia, Pseudomonas*
Bicarbonate: Liver acetate metabolism, diabetes, effect, *Frohman and Orten*, 315
Blood: Menadione and, reactions, *Canady and Roe*, 571
Vitamin E, determination, *Nair and Magar*, 157
Blood cell(s): Red, ghosts, adenosine esterification, adenosine and, effect, *Lionetti, Rees, Healey, Walker, and Gibson*, 467
Blood plasma: Tryptophan, determination, xanthydrol use, *Dickman and Crockett*, 957
Bone marrow: Thymidine, carbon 14-labeled, utilization, *Friedkin and Wood*, 639
Brain: Phospholipides, determination, micro-, *Robins, Lowry, Eydt, and McCaman*, 661
Sphingolipides, determination, micro-, *Robins, Lowry, Eydt, and McCaman*, 661
See also Cerebellum
Butyric acid: α,γ-Diamino-. *See* Diaminobutyric acid

C

Carbamylaspartic acid: Biosynthesis, *Lowenstein and Cohen*, 57
Carbohydrate: Metabolism, liver, Embden-Meyerhof and phosphogluconate oxidation pathways, relation, *Ashmore, Kinoshita, Nesbett, and Hastings*, 619
Oxidation, *Pseudomonas fluorescens, Narrod and Wood*, 45
—, — —, gluconokinase relation, *Narrod and Wood*, 45
—, — —, 2-ketogluconokinase relation, *Narrod and Wood*, 45
Carotenoid(s): Biosynthesis, *Mackinney, Nakayama, and Chichester*, 759
Catalase: Liver, isolation, *Greenfield and Price*, 607
Cerebellum: Lipides, *Robins, Eydt, and Smith*, 677
Chloro-L-alanine: β-, dehydrochlorination, enzymatic, *Gregerman and Christensen*, 765
Cholesterol: Metabolism, *Abell, Mosbach, and Kendall*, 527
—, embryo, chick, *Stokes, Fish, and Hickey*, 415
Choline: L-α-Glycerylphosphoryl-. *See* Glycerylphosphorylcholine
Citrovorum factor: *See Leuconostoc*
Coenzyme: A, acetate activation, effect, *Aisenberg and Potter*, 831
Cottonseed: Phospholipase D, succinic oxidase, effect, *Tookey and Balls*, 15
Creatine phosphoferase: Muscle, visceral, *Geiger*, 871
Cytidine: Prostate phosphatase, effect, *Schneider and Loring*, 129
Cytochrome: *c*, reduction, enzymes, flavin, effect, *Weber, Lenhoff, and Kaplan*, 93
Cytochrome peroxidase: *Pseudomonas fluorescens, Lenhoff and Kaplan*, 967

D

Dehydrase: Serine. *See* Serine dehydrase
Threonine. *See* Threonine dehydrase
Deoxyribonucleic acid: Biosynthesis, embryonic, thymidine, carbon 14-labeled, effect, *Friedkin, Tilson, and Roberts*, 627
Thymidine, uracil deoxyriboside relation, *Friedkin and Roberts*, 653
Diabetes: Liver acetate metabolism, fructose and bicarbonate effects, *Frohman and Orten*, 315
Diaminobutyric acid: α,γ-, pyridoxylidene derivatives, metal-chelated, *Christensen and Collins*, 279
Digitalis: Glycosides, metabolites, cardioactive, *Brown and Wright*, 431
Dipeptide(s): Ninhydrin and, reaction, *Yanari*, 683
Diphosphopyridine nucleotide: Derivative, *Chaykin, Meinhart, and Krebs*, 811

Diphosphopyridine nucleotide—*continued:*
Derivative, reduced, diphosphopyridine nucleotide reduced, formation from, enzymatic, *Meinhart, Chaykin, and Krebs,* 821

E

Embden-Meyerhof: Oxidation pathway, liver carbohydrate metabolism, relation, *Ashmore, Kinoshita, Nesbett, and Hastings,* 619
Embryo: Chick, cholesterol metabolism, *Stokes, Fish, and Hickey,* 415
Deoxyribonucleic biosynthesis, thymidine, carbon 14-labeled, effect, *Friedkin, Tilson, and Roberts,* 627
Enzyme(s): *N*-Acetyl-D-glucosamine, β-D-galactosides, synthesis, *Alessandrini, Schmidt, Zilliken, and György,* 71
β-Chloro-L-alanine dehydrochlorination, *Gregerman and Christensen,* 765
Co-. *See* Coenzyme
Diphosphopyridine nucleotide derivative, reduced, conversion to diphosphopyridine nucleotide, reduced, relation, *Meinhart, Chaykin, and Krebs,* 821
Flavin, iron, inorganic, and cytochrome *c* reduction, effect, *Weber, Lenhoff, and Kaplan,* 93
L-α-Glycerylphosphorylcholine formation, relation, *Uziel and Hanahan,* 1
Purine-metabolizing, *Tetrahymena pyriformis, Eichel,* 209
Serine-forming, system, *Alexander and Greenberg,* 775
Steroid keto groups, 11- and 20-, reduction, relation, *Hubener, Fukushima, and Gallagher,* 499
See also Adenosinetriphosphatase, Amylase, etc.
Epinephrine: *See also* Adrenaline
Erythrocyte(s): *See* Blood cell, red
Escherichia coli: Formate from pyruvate, formate determination, micro-, *Asnis and Glick,* 691

F

Fat: Absorption rate, *Tidwell, Dunkelberg, Wood, and Burr,* 733
Fatty acid(s): Essential, metabolism, *Steinberg, Slaton, Howton, and Mead,* 257
Oxidation, insulin effect, *Lossow, Brown, and Chaikoff,* 839
Tubercle bacillus lipides, *Cason and Fonken,* 391
Allen and Cason, 407
Cason, Allen, DeAcetis, and Fonken, 893
Feces: Steroids, carbon 19-labeled, *Miller, Turner, Fukushima, and Salamon,* 221
Ferritin: Adrenaline oxidation, catalytic, mechanism, *Green, Mazur, and Shorr,* 237
Iron, adrenaline oxidation, effect, *Mazur, Green, and Shorr,* 227
Flavin: Enzymes, iron, inorganic, and cytochrome *c* reduction, effect, *Weber, Lenhoff, and Kaplan,* 93
Formaldehyde: Carbon 14- and deuterium-labeled, metabolism, *Lowy, Brown, and Rachele,* 325
Formate: Pyruvate conversion to, *Escherichia coli,* determination, micro-, *Asnis and Glick,* 691
Fructose: Liver acetate metabolism, diabetes, effect, *Frohman and Orten,* 315
Fungus: *See Aspergillus*

G

Gluconate: Phospho-. *See* Phosphogluconate
Gluconokinase: Carbohydrate oxidation, *Pseudomonas fluorescens,* relation, *Narrod and Wood,* 45
Glucosamine: *N*-Acetyl-D-. *See* Acetyl-D-glucosamine
Glucose: D-, shikimic acid biosynthesis, relation, *Srinivasan, Shigeura, Sprecher, Sprinson, and Davis,* 477
Glutamate: Oxidation, typhus rickettsiae, phosphorylation relation, *Bovarnick,* 353

Glycerylphosphorylcholine: L-α-, formation, enzymatic, *Uziel and Hanahan*, 1
Glycine: Pyridoxylidene derivatives, metal-chelated, *Christensen and Collins*, 279
Glycogen: Liver, determination, anthrone reagent use, *Carroll, Longley, and Roe*, 583
Muscle, determination, anthrone reagent use, *Carroll, Longley, and Roe*, 583
Glycoside(s): Digitalis, metabolites, cardioactive, *Brown and Wright*, 431
Growth: Hormone, chromatography, *Ellis and Simpson*, 939
Guanidoacetic acid: Arginine synthesis, relation, *Horner, Siegel, and Bruton*, 861

H

Hemoglobin: Synthesis, reticulocytes, *in vitro, Kruh and Borsook*, 905
Histidine: Biosynthesis, imidazoleacetol phosphate transaminase, relation, *Ames and Horecker*, 113
Homogentisate: Metabolism, maleylacetoacetate isomerization relation, *Edwards and Knox*, 79
Homosteroid(s): D-, urine, *Fukushima and Gallagher*, 951
Hyaluronidase: Determination, turbidimetric, *Di Ferrante*, 303
Hydrogen peroxide: Adrenaline oxidation, effect, *Mazur, Green, and Shorr*, 227

I

Imidazoleacetol phosphate transaminase: Histidine biosynthesis, relation, *Ames and Horecker*, 113
Inositide: Monophospho-. *See* Monophosphoinositide
Insulin: Fatty acid oxidation, effect, *Lossow, Brown, and Chaikoff*, 839
Octanoate, carbon 14-labeled, oxidation, effect, *Lossow, Brown, and Chaikoff*, 839
Insulin—*continued:*
Palmitic acid, carbon 14-labeled, oxidation, effect, *Lossow, Brown, and Chaikoff*, 839
Intestine: Small, metabolism, Aminopterin effect, *Vitale, Gershoff, Sinisterra, Hegsted, and Zamcheck*, 363
Iron: Ferritin, adrenaline oxidation, effect, *Mazur, Green, and Shorr*, 227
Inorganic, reduction, enzymes, flavin, effect, *Weber, Lenhoff, and Kaplan*, 93
Metabolism, liver, *Saltman, Fiskin, and Bellinger*, 741
Saltman, Fiskin, Bellinger, and Alex, 751
Pseudomonas fluorescens electron transfer, effect, *Lenhoff, Nicholas, and Kaplan*, 983

K

Ketogluconokinase: 2-, carbohydrate oxidation, *Pseudomonas fluorescens*, relation, *Narrod and Wood*, 45
Kidney: Steroid perfusion, *in vitro, Lombardo, Hudson, and Yandel*, 699
Kinase: Glucono-. *See* Gluconokinase
Ketogluconо-. *See* Ketogluconokinase

L

Lactobacillus casei: Growth, 1,2-alkanediols, effect, *Camien, Dunn, and Geller*, 169
Lactobacillus leichmannii: Thymidine, carbon 14-labeled, metabolism, vitamin B_{12} effect, *Downing and Schweigert*, 521
Leuconostoc citrovorum: Factor, serine, carbon 14-labeled, incorporation into, *Doctor and Awapara*, 161
Linoleate: Arachidonic acid conversion to, *Steinberg, Slaton, Howton, and Mead*, 257
Lipase: Phospho-. *See* Phospholipase
Lipide(s): Cerebellar, *Robins, Eydt, and Smith*, 677

Lipide(s)—*continued:*
Fatty acids, tubercle bacillus, *Cason and Fonken,* 391
Allen and Cason, 407
Cason, Allen, DeAcetis, and Fonken, 893
Phospho-. *See* Phospholipide
Sphingo-. *See* Sphingolipide
Liver: Acetate metabolism, diabetes, fructose and bicarbonate effects, *Frohman and Orten,* 315
Carbohydrate metabolism, Embden-Meyerhof and phosphogluconate oxidation pathways, relation, *Ashmore, Kinoshita, Nesbett, and Hastings,* 619
Catalase isolation, *Greenfield and Price,* 607
Glycogen, determination, anthrone reagent use, *Carroll, Longley, and Roe,* 583
Iron metabolism, *Saltman, Fiskin, and Bellinger,* 741
Saltman, Fiskin, Bellinger, and Alex, 751
Metabolism, Aminopterin effect, *Vitale, Gershoff, Sinisterra, Hegsted, and Zamcheck,* 363
Monophosphoinositide, *McKibbin,* 537
Nucleotide, phosphorus 32-labeled, *Brumm, Potter, and Siekevitz,* 713

M

Maleylacetoacetate: Isomerization, homogentisate metabolism, relation, *Edwards and Knox,* 79
Malto-oligosaccharide(s): Glucosidic bonds, hydrolysis, salivary amylase, effect, *Pazur and Budovich,* 25
Menadione: Blood and, reactions, *Canady and Roe,* 571
Determination, *Canady and Roe,* 563
Proteins, denatured, and, reactions, *Canady and Roe,* 571
Mitochondrion: Adenosinetriphosphatase, progesterone effect, *Wade and Jones,* 547
Molybdenum: *Pseudomonas fluorescens* electron transfer, effect, *Lenhoff, Nicholas, and Kaplan,* 983
Monophosphoinositide: Liver, *McKibbin,* 537
Mucopolysaccharide(s): Acid, determination, turbidimetric, *Di Ferrante,* 303
Muscle: Glycogen, determination, anthrone reagent use, *Carroll, Longley, and Roe,* 583
Visceral, creatine phosphoferase, *Geiger,* 871
Myosin: Acto-. *See* Actomyosin

N

Ninhydrin: Dipeptides and, reaction, *Yanari,* 683
Nitrogen: Purines, origin, *Levenberg, Hartman, and Buchanan,* 379
—, precursors, *Sonne, Lin, and Buchanan,* 369
Nucleic acid: Deoxyribo-. *See* Deoxyribonucleic acid
Metabolism, vitamin B_{12} rôle, *Downing and Schweigert,* 513, 521
Nucleoside(s): Pyrimidine deoxy-. *See* Pyrimidine deoxynucleoside
Nucleotide(s): Diphosphopyridine. *See* Diphosphopyridine nucleotide
Metabolism, *Brumm, Potter, and Siekevitz,* 713
Phosphorus 32-labeled, liver, *Brumm, Potter, and Siekevitz,* 713
Purine. *See* Purine nucleotide
Pyrimidine. *See* Pyrimidine nucleotide
Utilization, *Roll, Weinfeld, Carroll, and Brown,* 439
Roll, Weinfeld, and Carroll, 455

O

Octanoate: Carbon 14-labeled, oxidation, insulin effect, *Lossow, Brown, and Chaikoff,* 839
Oxalic acid: Formation, *Aspergillus niger* effect, *Cleland and Johnson,* 595

Oxidase: Succinic. *See* Succinic oxidase
Oxygen: *Pseudomonas fluorescens* electron transfer, effect, *Lenhoff, Nicholas, and Kaplan,* 983

P

Palmitic acid: Carbon 14-labeled, oxidation, insulin effect, *Lossow, Brown, and Chaikoff,* 839
Pancreas: Amylase synthesis, relation, *Younathan and Frieden,* 801
Peptide(s): Di-. *See* Dipeptide
Peroxidase: Cytochrome. *See* Cytochrome peroxidase
Phosphatase: Adenosinetri-. *See* Adenosinetriphosphatase
Prostate, cytidine and phosphate, inorganic, effect, *Schneider and Loring,* 129
Phosphate: Adenosine di-. *See* Adenosine diphosphate
— tri-. *See* Adenosine triphosphate
Esterification, erythrocyte ghosts and adenosine effect, *Lionetti, Rees, Healey, Walker, and Gibson,* 467
Phosphoferase: Creatine. *See* Creatine phosphoferase
Phosphogluconate: Oxidation pathway, liver carbohydrate metabolism, relation, *Ashmore, Kinoshita, Nesbett, and Hastings,* 619
Phospholipase: D, plant, *Tookey and Balls,* 15
Phospholipase D: Cottonseed, succinic oxidase, effect, *Tookey and Balls,* 15
Phospholipide(s): Brain, determination, micro-, *Robins, Lowry, Eydt, and McCaman,* 661
Phosphorylase: Amylose formation, potato extracts and, relation, *Schwimmer and Weston,* 143
Phosphorylation: Oxidative, progesterone effect, *Wade and Jones,* 553
Plant: Phospholipase D, *Tookey and Balls,* 15
Polysaccharide(s): Muco-. *See* Mucopolysaccharide
Potato: Extracts, amylose formation, phosphorylase and, relation, *Schwimmer and Weston,* 143
Progesterone: Mitochondrial adenosinetriphosphatase, effect, *Wade and Jones,* 547
Phosphorylation, oxidative, effect, *Wade and Jones,* 553
Testes androgens, relation, *Slaunwhite and Samuels,* 341
Prostate: Phosphatase, cytidine and phosphate, inorganic, effect, *Schneider and Loring,* 129
Protein(s): Cationic, electrophoresis, *Monty, Morrison, Alling, and Stotz,* 295
Denatured, menadione and, reactions, *Canady and Roe,* 571
Separation, electrophoretic, *Bernfeld and Nisselbaum,* 851
Tryptophan, determination, xanthydrol use, *Dickman and Crockett,* 957
Protozoa: *See also Tetrahymena*
Pseudomonas fluorescens: Carbohydrate oxidation, *Narrod and Wood,* 45
— —, gluconokinase relation, *Narrod and Wood,* 45
— —, 2-ketogluconokinase relation, *Narrod and Wood,* 45
Cytochrome peroxidase, *Lenhoff and Kaplan,* 967
Electron transfer, oxygen, iron, and molybdenum, effects, *Lenhoff, Nicholas, and Kaplan,* 983
Purine(s): Biosynthesis, *Sonne, Lin, and Buchanan,* 369
Levenberg, Hartman, and Buchanan, 379
-Metabolizing enzymes, *Tetrahymena pyriformis, Eichel,* 209
Nitrogen, origin, *Levenberg, Hartman, and Buchanan,* 379
—, precursors, *Sonne, Lin, and Buchanan,* 369
Purine nucleotide(s): Labeled, utilization, *Roll, Weinfeld, Carroll, and Brown,* 439
Purine riboside: Metabolism, *Gordon and Brown,* 927

Pyrimidine deoxynucleoside(s): Carbon 14-labeled, preparation, *Downing and Schweigert*, 513
Pyrimidine nucleotide(s): Metabolism, *Roll, Weinfeld, and Carroll*, 455
Pyruvate: Formate from, *Escherichia coli*, formate determination, micro-, *Asnis and Glick*, 691

Q

Quinone(s): Identification, *Canady and Roe*, 563

R

Reticulocyte(s): Hemoglobin synthesis, *in vitro, Kruh and Borsook*, 905
Retina: Histochemistry, *Lowry, Roberts, and Lewis*, 879
Riboside: Purine. *See* Purine riboside

S

Saccharide(s): Malto-oligo-. *See* Malto-oligosaccharide
Saliva: Amylase, malto-oligosaccharide glucosidic bonds, hydrolysis, effect, *Pazur and Budovich*, 25
Serine: Carbon 14-labeled, incorporation into citrovorum factor, *Doctor and Awapara*, 161
-Forming enzyme system, *Alexander and Greenberg*, 775
Serine dehydrase: *Sayre and Greenberg*, 787
Shikimic acid: Biosynthesis, D-glucose relation, *Srinivasan, Shigeura, Sprecher, Sprinson, and Davis*, 477
Sphingolipide(s): Brain, determination, micro-, *Robins, Lowry, Eydt, and McCaman*, 661
Steroid(s): Carbon 19-labeled, feces, *Miller, Turner, Fukushima, and Salamon*, 221
D-Homo-. *See* Homosteroid
Keto groups, 11- and 20-, reduction, enzyme relation, *Hubener, Fukushima, and Gallagher*, 499
Perfusion, kidney, *in vitro, Lombardo, Hudson, and Yandel*, 699
Succinic oxidase: Cottonseed phospholipase D effect, *Tookey and Balls*, 15

T

Taurine: Sulfur 35-labeled, metabolism, *Portman and Mann*, 105
Testis: Androgens, progesterone relation, *Slaunwhite and Samuels*, 341
Tetrahymena pyriformis: Enzymes, purine-metabolizing, *Eichel*, 209
Threonine dehydrase: *Sayre and Greenberg*, 787
Thymidine: Carbon 14-labeled, embryonic deoxyribonucleic acid synthesis, effect, *Friedkin, Tilson, and Roberts*, 627
— —, metabolism, *Lactobacillus leichmannii*, vitamin B_{12} effect, *Downing and Schweigert*, 521
— —, utilization, bone marrow and thymus nuclei, *Friedkin and Wood*, 639
Thymus: Nuclei, thymidine, carbon 14-labeled, utilization, *Friedkin and Wood*, 639
Transaminase: Imidazoleacetol phosphate. *See* Imidazoleacetol phosphate transaminase
Tricarboxylic acid: Cycle, acids, *Frohman and Orten*, 315
Tryptophan: Blood plasma, determination, xanthydrol use, *Dickman and Crockett*, 957
Proteins, determination, xanthydrol use, *Dickman and Crockett*, 957
Tubercle bacillus: Lipide fatty acids, *Cason and Fonken*, 391
Allen and Cason, 407
Cason, Allen, DeAcetis, and Fonken, 893
Typhus rickettsiae: Glutamate oxidation, phosphorylation relation, *Bovarnick*, 353

U

Uracil deoxyriboside: Deoxyribonucleic acid thymidine from, *Friedkin and Roberts*, 653

Urine: D-Homosteroids, *Fukushima and Gallagher,* 951

V

Viscus: Muscle, creatine phosphoferase, *Geiger,* 871

Vitamin: B_{12}, nucleic acid metabolism, rôle, *Downing and Schweigert,* 513, 521

—, thymidine, carbon 14-labeled, metabolism, *Lactobacillus leichmannii,* effect, *Downing and Schweigert,* 521

E, blood, determination, *Nair and Magar,* 157

X

Xanthydrol: Blood plasma tryptophan determination, use, *Dickman and Crockett,* 957

Protein tryptophan determination, use, *Dickman and Crockett,* 957

Reactions, *Dickman and Crockett,* 957

Y

Yeast: Amino acid biosynthesis, effect, *Vavra and Johnson,* 33

2018
